Project Experience Summary

Project : [On HealthCare Domain](#)
Role : Software Test Engineer(Manual & Automation)
Tools : Jira, Selenium
Database : MySQL(basics)
Project Duration : August 2014 – Till Now

Project Profile:

The Enterprise Cloud EHR from healthcare is an enterprise-class, Internet-optimized Electronic Health Record platform that's changing the rules of mission-critical infrastructure. An electronic health record EHR: is systematic collection of electronic health information about individual patients or populations. It is a record in digital format that is capable of being shared across different health care settings or facilities. iCare allows sharing of data to occur by utilizing a secure "cloud" architecture that enables on-demand enterprise-wide information systems and other information networks or exchanges to call on real time data. EHRs include a range of data, including demographics, medical history, medication and allergies, immunization status, laboratory test results, radiology images, vital signs, personal stats like age and weight, and more.

My Contribution:
